We will have our products at the upcoming CIOE exhibition in Shenzen! Meet the Tunable Mighty Light, Flexible Wavelength Selector and our brand new hyperspectral imaging solutions!

Innovative hyperspectral imaging and application examples (Visible & SWIR)

By implementing our tunable bandpass filters we have overcome the drawbacks of other hyperspectral imaging methods to provide faster and higher resolution.

From enhanced data acquisition capabilities to improved spectral resolution, our technology can be applied in a wide range of applications, from agriculture, environmental monitoring to detection of product defects.

Tunable Light Sources

Fully tunable light sources and laser systems with wide tunable wavelength and bandwidth range

[View details](#)

Tunable Bandpass Filters

Applicable with any broadband light sources,
CWL tuning range : 255 - 1650 nm
FWHM tuning range : 3 - 15 nm

[View details](#)

Light Sources

A wide variety of powerful broadband light sources including tungsten-halogen/plasma lamps, LEDs and pico-second pulsed supercontinuum lasers
